

Link a document through a list to the website

It is possible to list of certain information through a webpage.
On the main screen, go to “Settings” and “Database manager”

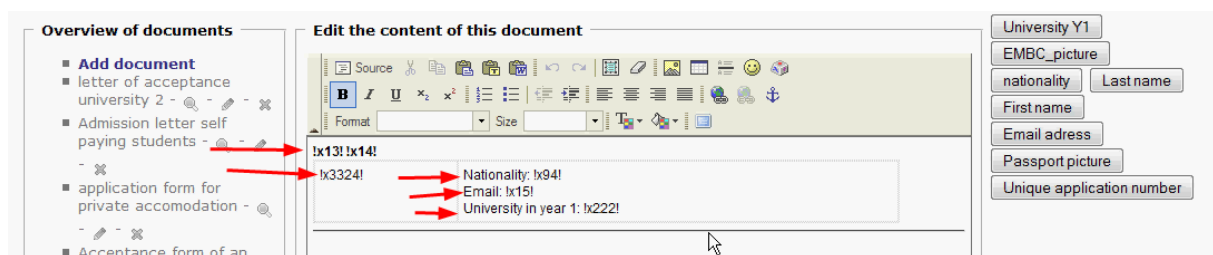

First you need to design a document:

For example I want to make a list of alls studens sin a certain group (here: Student_web_list_year1)

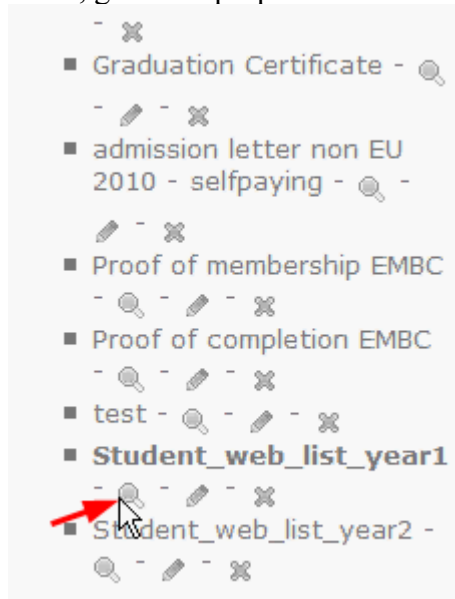

Press the pencil icon

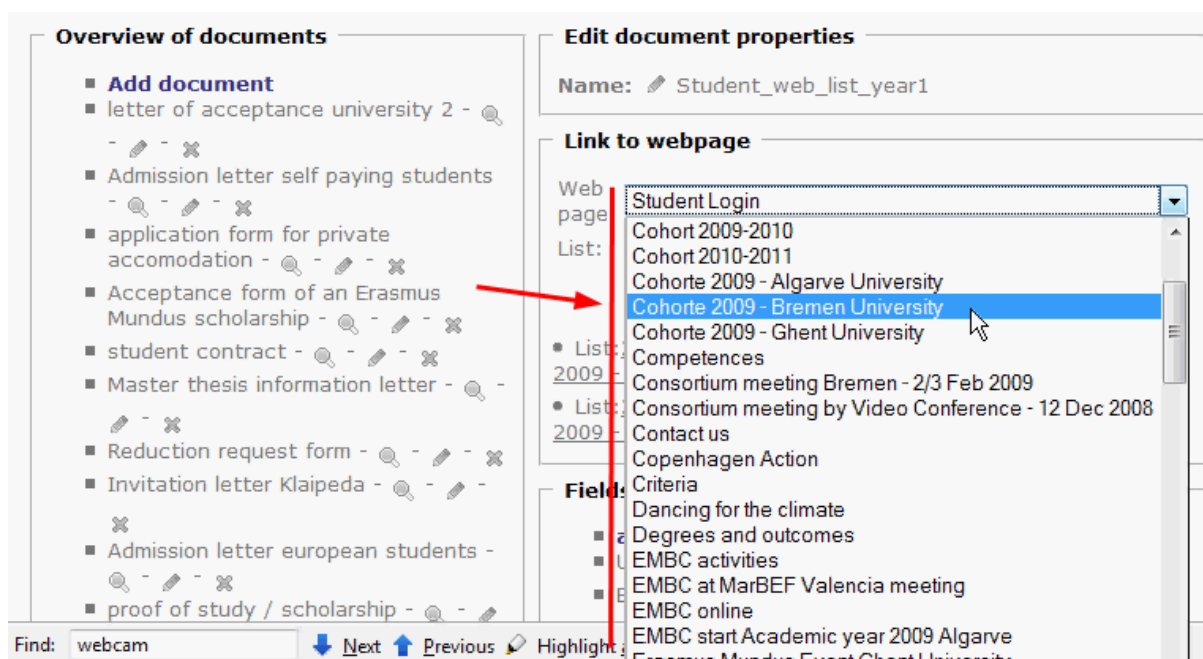

This page shows us the datafields of the name of the student, his/her picture, nationality, emailaddress and university year.

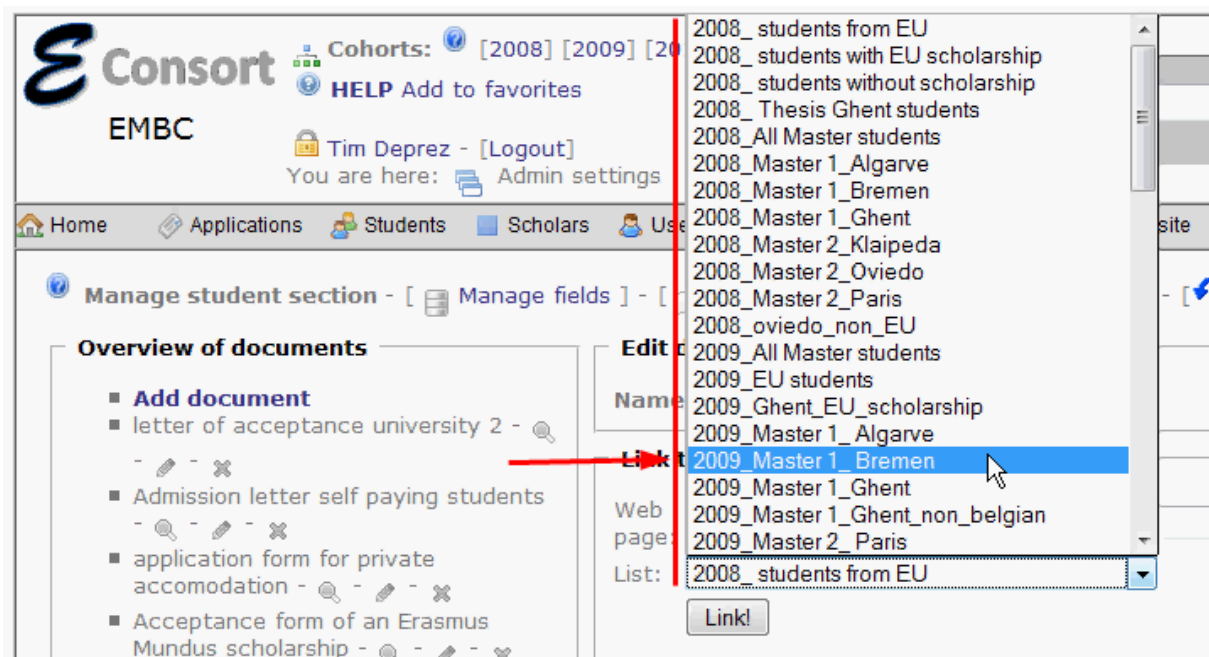

Next , go to the properties of this list, by clicking on the magnifying glass next to the list

This will show you the next page, where the link to the webpage and link are indicated. Here you make the choice on which webpage which list is applied to.

So, for webpage, “Cohorte 2009 – Bremen University” is selected.

As for list “2009_Master 1_Bremen”

After making your choices, press the “Link” button.

Link to webpage

Web page: Cohorte 2009 - Bremen University

List: 2009_Master 1_ Bremen

[Link](#)

In your browserwindow the webpage containing the list of students is shown
